# Who We Are...

HotRot Organic Solutions established itself in the UK in 2006 and has consistently grown in terms of staff levels and financial turnover.

HotRot in the UK is based at our Head Office in Cambridge and has UK wide regional locations.

We have delivered numerous large and small projects from the northern most parts of Scotland to the South East of England.

From our Global Head Office in Christchurch New Zealand and outlying offices, we offer global coverage with over 40 reference plants worldwide.

ORGANIC SOLUTIONS

## HotRot Organic Solutions

**HOTROT ORGANIC SOLUTIONS IS POISED TO BECOME  
A MARKET LEADER IN THE COMPOSTING & ANAEROBIC  
DIGESTION SECTOR.**

2011 BROCHURE

# What We Do...

## Customer Driven & Cost effective

Our solutions provide complete legislative and regulatory compliance at a realistic price.

We bring together diverse technologies that offer the full range of biological treatment possibilities, including being fully compliant to animal by-product regulations.

We are not restricted to one solution for every problem; on the contrary, each solution is tailor-made based on:

- Customer's individual needs and concerns.
- Customer's desire to produce renewable heat and power.
- Site constraints.
- Finances.
- The required quality and form of composted product.

**Our intent is to simply provide the best practical advice and service possible, going much further than simple technology provision. We work on the basis that what is good for you is good long term business for us.**

## Company Ethos

HotRot Organic Solutions believes that the greatest measure of success for a waste treatment operation is achieved through a low-profile process that guarantees no odour or noise nuisance and the minimum of onsite operations. Our technologies convert biodegradable materials into essential resources such as compost and biogas. HotRot Organic Solutions is committed to providing tailor-made solutions thus providing an essential alternative to landfill disposal.

*“ The HotRot team were very helpful with advice. The system works very well by itself with minimal intervention... simply load it up at the beginning of the day and off it goes. This has turned out to be the ideal solution providing us with massive savings, an improvement in our environment credentials and a usable product at the end. ”*

Claire Pipe, Conservation Officer  
**Twycross Zoo**

*“ When asked: ‘Would I do it again?’ I reply, ‘Yes, it works!’ ”*

Graham Wallace, Glasgow City Council  
**Wholesale Fruit and Vegetable Market**

*“ The plant is impressive, sophisticated and practical. Feeding is automatic. Operation can be remotely monitored. Material residence times and temperatures are continuously monitored to provide assurance of compliance with composting standards. ”*

D. G. Hock, Solid Waste Manager  
**Selwyn District Council**

# Our Company...

## Values

- Hard work & Integrity
- Openness & Honesty
- Dynamism & Innovation
- Excellence

## We Aim to.....

- Develop lasting & loyal relationships with our partners & clients based on our 'Company Values'.
- Always deliver exceptional service quality.
- Provide low-risk solutions acceptable to planners, regulators and the general public.
- Deliver both Environmentally & Economically Sustainable Solutions.
- Develop projects that always exceed requirements.
- Provide the most advanced organic waste treatment processes.
- Provide safe, automated processes that reduce cost, time and operator exposure .
- Provide future proofed waste treatment solutions that satisfy both present & future projected needs.
- Match the appropriate technology to your specific needs.
